

In the Specification

Please replace the paragraph at page 2, line 20 with the following:

For example, in US 4,343,095 to Rosen et al., water that accumulates on the bottom ~~[[if]]~~  
of the drying chamber from condensation of steam or from free water being forced out of the  
ends of the boards by internal pressure in the wood, is periodically ejected from the dryer.

Please replace the paragraph at page 11, line 15 with the following:

Additionally, the evaporation device may comprise a pump to ~~[[erect]]~~ direct the  
collected water back into the kiln chamber for heating to effect evaporation. A pump chamber  
**60** may be used to direct flow of the processed water in the kiln system.
